NOT SCARY BINARY - EXERCISES

YOU CAN DO THIS!

BINARY TO DECIMAL

Translate the following to decimal:

- A.10011011
- B.01101100
- C.10101010
- D.01110111
- E.11111111

DECIMAL TO BINARY

Convert these numbers to binary:

- A. 250
- B. 127
- **C.** 99
- D. 131
- E. 197

BINARY IS NOT JUST FOR NUMBERS

ASCII is a way of encoding letters as numeric values. The table shown here shows the numeric code for each character. Using this table, translate the message below:

| Dec | Chr |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| 0 | NUL | 26 | SUB | 52 | 4 | 78 | N | 104 | h |
| 1 | SOH | 27 | ESC | 53 | 5 | 79 | 0 | 105 | i |
| 2 | STX | 28 | FS | 54 | 6 | 80 | Р | 106 | j |
| 3 | ETX | 29 | GS | 55 | 7 | 81 | Q | 107 | k |
| 4 | EOT | 30 | RS | 56 | 8 | 82 | R | 108 | L |
| 5 | ENQ | 31 | US | 57 | 9 | 83 | S | 109 | m |
| 6 | ACK | 32 | | 58 | : | 84 | Т | 110 | n |
| 7 | BEL | 33 | ! | 59 | ; | 85 | U | 111 | 0 |
| 8 | BS | 34 | " | 60 | < | 86 | V | 112 | р |
| 9 | HT | 35 | # | 61 | = | 87 | W | 113 | q |

| 25 | EM | 51 | 3 | 77 | M | 103 | g | | |

THE ANSWERS

BINARY TO DECIMAL

Translate the following to decimal:

```
A.10011011 = 155
```

$$B.01101100 = 108$$

$$C.10101010 = 170$$

$$D.01110111 = 119$$

DECIMAL TO BINARY

Convert these numbers to binary:

```
A.250 = 11111010
```

$$B.127 = 01111111$$

$$c.99 = 01100011$$

$$D.131 = 10000011$$

$$E.197 = 11000101$$

BINARY IS NOT JUST FOR NUMBERS

ASCII is a way of encoding letters as numeric values. The table shown here shows the numeric code for each character. Using this table, translate the message below:

| Dec | Chr |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| 0 | NUL | 26 | SUB | 52 | 4 | 78 | N | 104 | h |

Binary is not scary!

SIGN ME UP!

MORE CONVERSION

Provide both the unsigned and signed values for the binary below:

- A.10000000
- B.01110000
- C.10000111
- D.11110000
- E.11111111

HARD LIMITS

IPv6 uses 128-bit addresses. What is the maximum number of unique IP addresses that can be represented?

DOS partition tables use 32-bit unsigned values to store the number of sectors in the partition.

- A. What is the maximum number of sectors in a partition?
- B. If each sector is 512 bytes, what is the maximum partition size?

MY RETIREMENT PLAN

Unix traditionally stores timestamps as 32-bit signed integers representing the number of seconds from Jan 1, 1970. If there are 86400 seconds per day and 365 days in a year, what is the largest year that can be represented?

THE ANSWERS

MORE CONVERSION

| | Unsigned: | Signed: |
|------------|-----------|---------|
| A.10000000 | 128 | -128 |
| B.01110000 | 112 | 112 |
| C.10000111 | 135 | -121 |
| D.11110000 | 240 | -16 |
| E.1111111 | 255 | -1 |

HARD LIMITS

IPv6 uses 128-bit addresses. What is the maximum number of unique IP addresses that can be represented?

 $2^{128} - 1$ (more than 3.4 x 10^{38} unique addresses)

DOS partition tables use 32-bit unsigned values to store the number of sectors in the partition.

- A. What is the maximum number of sectors in a partition?
- B. If each sector is 512 bytes, what is the maximum partition size?

$$2^{32} - 1 = 4,294,967,295$$
 sectors
Multiply by 512 bytes/sector = 2,147,483,647 KB, or 2TB

MY RETIREMENT PLAN

Unix traditionally stores timestamps as 32-bit signed integers representing the number of seconds from Jan 1, 1970. If there are 86400 seconds per day and 365 days in a year, what is the largest year that can be represented?

 $2^{32-1} - 1 = 2,147,483,647$ seconds 2,147,483,647 / (86400 * 365) = 68 years Largest possible year: 1970 + 68 = 2038

BE SURE TO COVER ALL YOUR BASES

BINARY TO HEX

In a previous exercise, we translated the following ASCII bytes to "Binary is not scary!". Now convert them to hex.

HEX TO DECIMAL

When looking at low-level packet captures, IP addresses are sometimes displayed as four bytes in hex. Translate the following hex numbers as IP addresses (e.g. 10.37.128.16).

- A. 0x0a01010a
- B.0xc0a80a89
- C.0xac100c63

ASKING PERMISSION

Convert Unix permissions "rw-r--r-" to a set of three octal digits

What Unix permissions are represented by the octal string 711?

THE ANSWERS

BINARY TO HEX

In a previous exercise, we translated the following ASCII bytes to "Binary is not scary!". Now convert them to hex.

```
01000010 01101001 01101110 01100001 01110010 42 69 6E 61 72 01111001 00100000 01101001 01110011 00100000 79 20 69 73 20 01101110 01101111 01110100 00100000 01110011 6E 6F 74 20 73 01100011 01100001 01110010 01111001 00100001 63 61 72 79 21
```

HEX TO DECIMAL

When looking at low-level packet captures, IP addresses are sometimes displayed as four bytes in hex. Translate the following hex numbers as IP addresses (e.g. 10.37.128.16).

A. 0x0a01010a 10.1.1.10

B. 0xc0a80a89 **192.168.10.137**

C.0xac100c63 172.16.12.99

ASKING PERMISSION

Convert Unix permissions "rw-r--r" to a set of three octal digits 644

What Unix permissions are represented by the octal string 711?

rwx--x--x

WHICH END IS UP?

THAT'S THE EXTENT OF IT

EXT4 extents consist of four little endian fields:

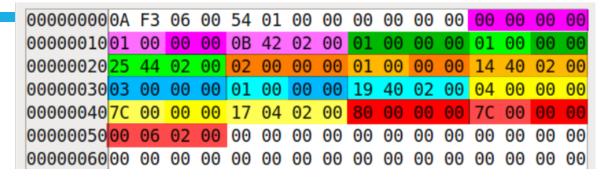

- 1. Four byte logical offset
- 2. Two bytes for the length of the extent in blocks
- 3. Two bytes for the upper 16 bits of the 48 bit starting block address
- 4. Four bytes for the lower 32 bits of the starting block address

There are six extents shown in the picture. Convert the bytes in each field from little-endian to bigendian, and then convert the values to decimal.

THE ANSWERS

THAT'S THE EXTENT OF IT

- 1. Logical Offset: 0, Number of Blocks: 0x0001 = 1, Starting Block: 0x0000 ~ 0x0002420B = 147979
- 2. Logical Offset: 0x00000001 = 1, Number of Blocks: 0x0001 = 1, Starting Block: 0x0000 ~ 0x00024425 = 148517
- 3. Logical Offset: 0x00000002 = 2, Number of Blocks: 0x0001 = 1, Starting Block: 0x0000 ~ 0x00024014 = 147476
- 4. Logical Offset: 0x00000003 = 3, Number of Blocks: 0x0001 = 1, Starting Block: 0x0000 ~ 0x00024019 = 147481
- 5. Logical Offset: 0x00000004 = 4, Number of Blocks: 0x007C = 124, Starting Block: 0x0000 ~ 0x00020417 = 132119
- 6. Logical Offset: 0x00000080 = 128, Number of Blocks: 0x007C = 124, Starting Block: 0x0000 ~ 0x00020600 = 132608

SHIFTY PEOPLE WITH MASKS

HARD CIDR

CIDR notation represents a network mask as a number of bits. For example, "/24" means a 24-bit netmask, which can be represented as 0xFFFFFF00 where the upper 24 bits are all ones.

What are the hex netmasks for the following CIDR values?

- A. /16
- B. /20
- C. /27

MY TIME IS PACKED

EXT4 uses 32-bit fields to represent the nanoseconds field in timestamps. You only need 30 bits to represent nanoseconds (bonus points if you can show why). So EXT4 uses the upper 30 bits for the nanoseconds and the lower two bits to extend the seconds field for the normal Unix epoch timestamp.

Below are four nanosecond fields from a file in EXT4 (represented in big-endian byte order). Extract the nanoseconds from the upper 30 bits as a hex value. If you have a calculator handy, convert the value to decimal.

- 1. 0xD86D8324
- 2. 0x4A7502E4
- 3. 0xEAEABC70
- 4. 0xA125C840

SHIFTY PEOPLE WITH MASKS

HARD CIDR

CIDR notation represents a network mask as a number of bits. For example, "/24" means a 24-bit netmask, which can be represented as 0xFFFFFF00 where the upper 24 bits are all ones.

What are the hex netmasks for the following CIDR values?

MY TIME IS PACKED

- 1. 0xD86D8324 = 11011000011011011000001100100100 >> 2 = 00110110000110110110000011001001 = 0x361B60C9 (907763913 decimal)
- 2. 0x4A7502E4 = 01001010011101010000001011100100 >> 2 = 0001001010101010100000010111001 = 0x129D40B9 (312295609 decimal)
- 3. 0xEAEABC70 = 11101010111010101011110001110000 >> 2 = 00111010101111010101111100011100 = 0x3ABAAF1C (985313052 decimal)
- 4. 0xA125C840 = 10100001001001011100100001000000 >> 2 = 00101000010010010111001000010000 = 0x28497210 (675901968 decimal)
